KAPHAPHYSIO

What is radial shockwave ?

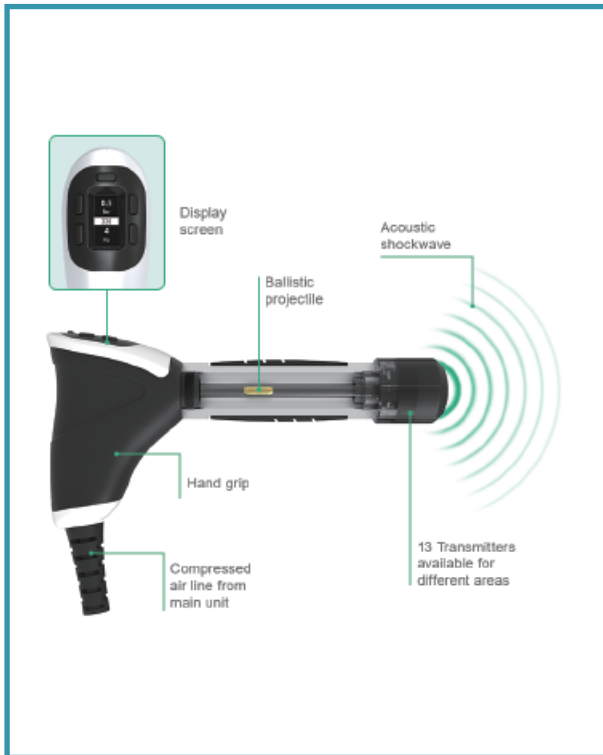

- Radial shockwave therapy is a method for the treatment of orthopedic disorders. A bullet accelerated in the handpiece generates a mechanical pressure wave, which is transferred to the human body by an applicator head and which radiates out in the tissue.
- The mechanical energy is absorbed by the tissue and decreases as the distance from the application site increases. The mechanical stress triggers reactions in the tissue that have a positive influence on a wide range of orthopedic and neurological conditions.

Shockwave Therapy

Shockwave works well for recovery and is often used for treating chronic pains or injuries such as plantar fasciitis, tennis elbow, shoulder tendinopathies.

- **10Bar & 21Hz** High Intensity
- **0.1Bar** Precise Energy Regulation
- **4-8CM** Deep Penetration
- **13PCS** Transmitters Available
- **3,000,000 Shots** Lifespan

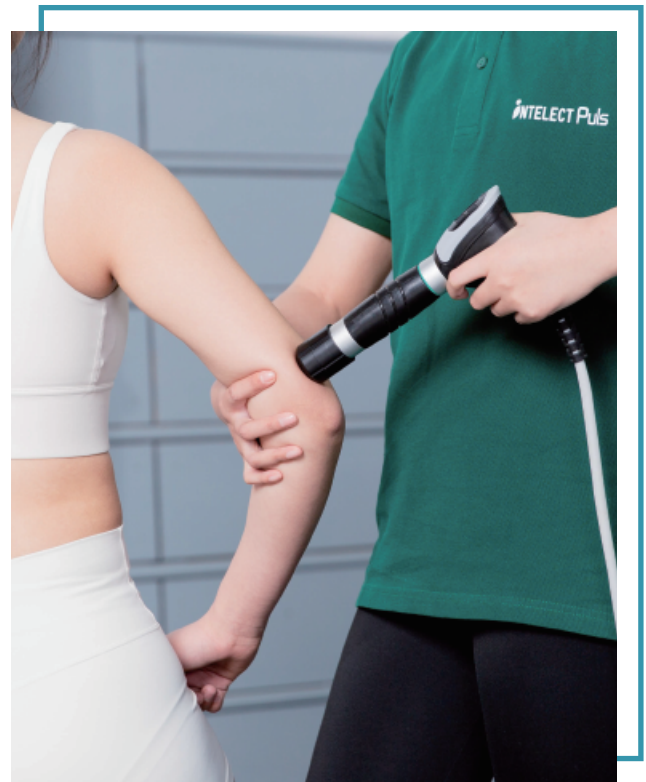

Shockwave For Pain Therapy

Shockwave therapy is equipped with 6 transmitters specially used for pain management, available for different treatment areas. The upgraded transmitters are more powerful and achieve deeper energy penetration, more conducive to pain treatment.

Pain Management

Shockwave For Fascia Therapy

Shockwave therapy gives a gradual release of trigger points and adhesions in the affected muscles and fascia via therapeutic pressure and gliding. This can provide enormous pain relief.

Spine Specific

SHOCKWAVE THERAPY

- Offers precise energy adjustment with accuracy up to **0.1 Bar**
- Delivers high-intensity treatment at **10 Bar** and **21 Hz** for effective results
- Enables deep penetration of **4-8CM** for targeted therapy
- **3,000,000 Shots** for long-lasting performance

SMART USER INTERFACE

- **12.1-inch** touch screen panel
- Precise parameter control
- Helpful reference for symptoms in specific body parts
- Smart software with default parameters and clinical protocols

MORE APPLICATION TIPS

- **13PCS** Transmitters Available
- **6PCS** Transmitters For **Pain Therapy**
- **4PCS** Transmitters For **Fascia Treatment**
- **3PCS** Transmitters For **Spine Treatment**

Technical Data

Model:	INTELECT Puls 30
Technology:	Pneumatic Shockwave
Function:	Pain Relief, Physiotherapy

Shockwave:	10Bar & 21Hz
Transmitter:	13PCS
Pain Management:	6PCS
Fascia Specific:	4PCS
Spine Specific:	3PCS

Touch Screen:	12.1 Inch
Package:	60*58*44CM
Gross Weight:	34KG

Kaphaphysio is the leading physiotherapy device manufacturer, integrating R&D, production, sales, and after-sales service. We offer popular and innovative physiotherapy technologies, including magnetic therapy, tecar therapy, shockwave therapy, ultrasound therapy, laser therapy, infrared therapy, and EMS. Our professional technical team has more than 20 years of experience. They can provide OEM & ODM services and offer customization solutions promptly. Due to our large inventory, 95% of products can be shipped within 3 days or even faster, within 24 hours. If you choose to collaborate with us, we will provide online video training and treatment protocols directly from our experienced physiotherapists. Lifetime technical support is included, and if you encounter any after-sales issues during operation, we will provide solutions within 24 hours.
